Dear Prime Minister, Health Minister, Chief Medical Officer and Dr. Tony Bartone,

You have one of the most deadly problems facing Australia. You have been tasked to solve the problems caused by this killer virus and the operations that you are undertaking are admirable and effective, albeit not completely.

There is more that you can do to be your best.

My colleagues and I have provided a significant amount of evidence that some of the most powerful bio-chemicals that can influence our good health at times of rampant infection are vitamins C ,D and the trace element Zinc.

Instead of attaching more of the scientific publications supporting these nutrients in the best of public health policies, I am sending a couple of short videos.

The first is a video of China's Holistic Approach to the Covid19 attack. TCM contains herbs that are strongly antiviral. You will notice in the video also that they are using intravenous solutions. In fact they are using the High Dose Intravenous Vitamin C that we have been speaking about. It has been a very significant element of China's patient management

speaking about. It has been a very significant element of China's patient management success, especially in hospitals and ICU.

The second will be in a second email to you.

I have been to Wuhan and other parts of China more than 50 times since the early 1990's. I have a little understanding of their culture. They don't use anything that doesn't work, most of the time. We have a colleague on the ground in Wuhan who can attest to the use of HDIVC.

We don't have to let this chaos, panic, waste and stress, and I emphasise stress, continue at the rate that it is when we have something almost equivalent to a vaccine. Stress actually increases your likelihood of a more serious illness if you do become infected.

Prime Minister and Health Minister, we can win this quicker and with far fewer casualties.

Please take this advice from a international groups of doctors who have been specialising in Nutritional Medicine for over 40 years. We are the specialists in this arena.

I remain,
Yours sincerely,

Professor Ian Brighthope
